-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21 and 22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Each claims recites “at least one fixation member”, however, in claim 20, upon which both claims depends, “at least one fixation member” has already been set forth. It is unclear as to the number of fixation members required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Huang #4,671,383. Huang discloses a ladder base leveler comprised of a coupling member 1, having first and second receiving members 11, 12, telescopic cross members 111, 121, securing means

134, and adjustable fixation members 25 that are located against the receiving members, as best seen in Figure 1.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Land #6,929,093.

Land discloses a ladder base assembly comprised of a coupling member 10, having first and second receiving members 14, 12, telescopic cross members 166, 180, and securing means 192.

Allowable Subject Matter

Claims 11-19 are allowed.

Claims 2-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The primary reason for the allowable subject matter of claim 2 (and the allowance of claim 11) is the inclusion of the fixation means (for retaining the first and second receiving members from movement relative to the supporting surface) slidably mounted within interior channels of the sleeves attached against outer side walls of the receiving members and retained therein by insertion of a connecting member through aligned holes within the fixation means/member.

Conclusion

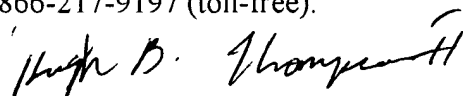

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Agombar et al #2,623,679 is cited to teach ladder base assemblies.
